

# Infrastructure Management

Automation of infrastructure processes

## Audience:

Companies with many diverse work station systems/ servers which have to be kept up to date in terms of current (production compliant) patch-/ software- as well as configuration status (high infrastructure complexity)

## Service:

Standardized and highly automated handling with:

- Frequency of alarms and escalation
- Manual, undefined changes
- Difficult application release
- Virtual complexity

## Application Software:

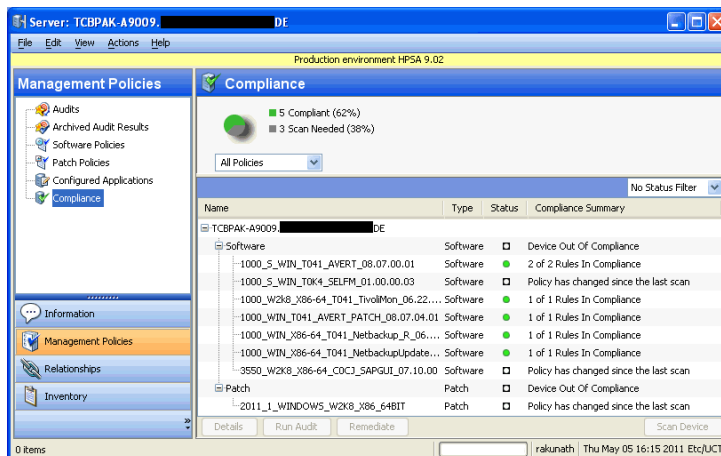

- HP Operations Orchestration
- Server Automation
- HP Sitescope

## Benefits:

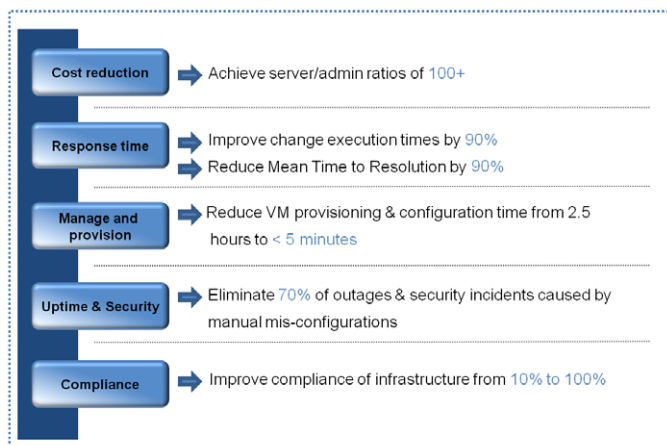

- Significant reduction of infrastructure- and process costs
- Increase of speed, flexibility and agility regarding the provision of resources
- Risk minimization respecting the system provisioning and maintenance
- Optimum control over all infrastructure processes
- Improved implementation of security-relevant processes
- Rapid fulfillment of changes and human error prevention
- Recognition, diagnostics and bug fixing in order to re-establish the IT Service
- Effort reduction of deployment and patch execution
- Management and provisioning of virtual infrastructure by heterogeneous virtualization layer

## HP Server Automation

- Physical and virtual server management during the life cycle of the server and its applications
- Automatic configuration scans (identification of server, software, inspection of server hardware and application dependencies)
- Configuration management (Patching, script execution)
- Software deployment
- Compliance Security guidelines (audit of policies, views, reports)
- Microsoft Windows, Solaris, Linux (Red Hat and SuSE), AIX and HP-UX systems will be supported
