

Model-Based Testing

Model-based operation enables the organization of complex systems and simplifies a system's adjustment to necessary changes. By using models test processes can easily be automated.

Audience:

- Operators of complex software applications
- Users who quickly have to adjust their software system to new requirements
- Producers of embedded systems

Service:

- Cost reduction through performance optimization
- Structuring complex software
- Simple automation of test cases

Applicable software:

- HP QualityCenter / HP ALM
- Enterprise Architec

Benefits:

Process optimization:

- Analyze and optimize system and test processes
- Introduce agile methods
- Make use of continuous integration in system development and component testing

Save time:

- Shortened time to market for the deployment of your applications
- Quick adjustment to changes

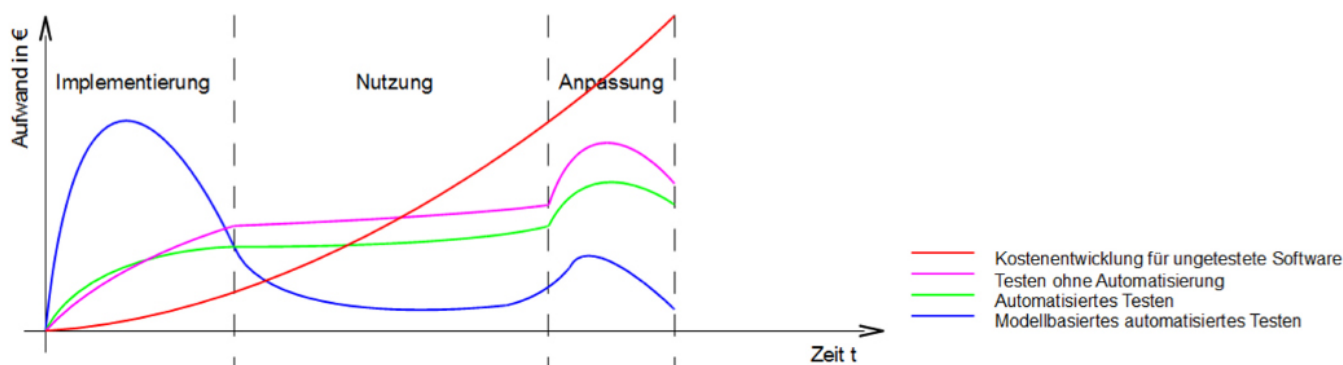

Assuring project quality:

- Accompanying project management
- Test coverage is controlled through the model

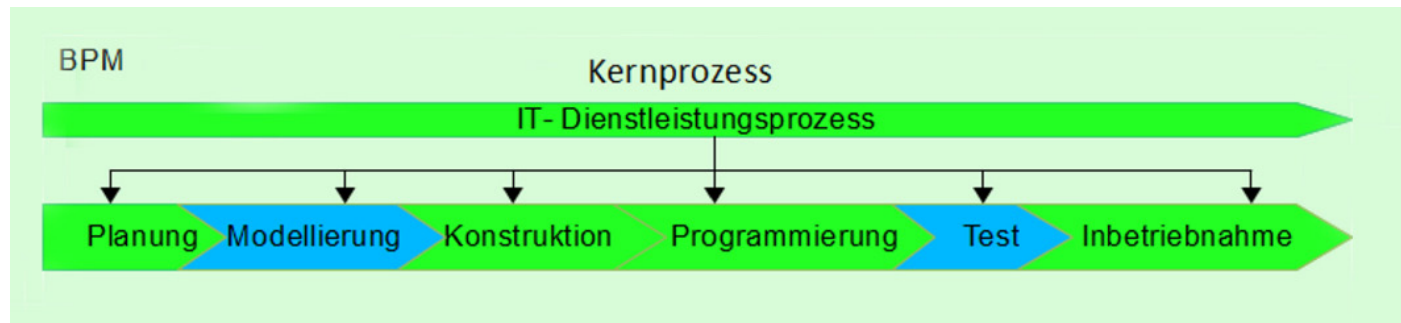

Our solution: ... advise, conception, model building, testing, and staff training by profi.com

Improving test processes saves costs:

Every development and implementation of a system causes costs. Improving the control over software packages and connected test cases, helps to better manage and reduce follow-up costs.

The creation and use of software are part of a common business process. Modeling and testing can be integrated smoothly into existing business processes while maintaining full cost control and calculating the ROI. We support you in creating business process models (BPMs).

profi.com services:

- Cost-benefit analysis for the use of model-based testing
- Development of BPM and use case models for complex software as well as for embedded systems
- Conception and implementation of system architecture and automation functions
- Advising and training of staff
